Access, engineered for modern living.

Retesz / Multifamily project discussion

- One unified eight-model collection.
- Select by opening, form factor and exact app configuration.
- A clear project brief before commercial commitments.

Eight models. One collection.

Core · Classic · Axis · Vision · Vision Pro · Arc · Line · Edge

- Two smart deadbolts and six smart handle locks.
- Verified finishes and door thickness ranges are model-specific.
- Product visualizations are labeled; they are not installation evidence.

Start with the door schedule.

Specify fit before scale

- Record units, doors per unit and common-area openings.
- Axis, Arc, Line and Edge: TTLock and single-latch options, not every unit.
- Verify US wooden-door dimensions, handing, backset, thickness, latch prep and compliance.
- Confirm dimensions, installation documentation and suitability before ordering.

Technology follows the model.

Avoid range-wide assumptions

- Core & Classic: local Bluetooth, no gateway required for local operation.
- Vision: documented Tuya WiFi variant with camera hardware.
- Other handle app variants require their individual connectivity review; do not infer remote capabilities.

Build a considered project brief.

500–5,000+ lock enquiries

- Quantity = residential units × doors per unit + common-area locks.
- Choose a model mix and request evaluation samples where useful.
- Share property type, company, contact details and timeline. No prices or savings are estimated.

The next conversation.

retesz.com/professionals/projects · sales@retesz.com

- Request a model-specific bulk quote and pricing review.
- Confirm availability, allocation, delivery and commercial terms separately.
- Inquiries are securely stored for review; no order is placed by submission.
